

# Equine Hoof Health

with Dr. Ric Redden

**Friday & Saturday  
September 29-30, 2017**

Madison Marriott West - Middleton, WI

A combination of lectures and live demonstrations will create an intense program that captivates those wanting to learn the “out of the box” thought process and help to start thinking their way through foot issues. Participants are able to see the simplicity of observing small details that they never considered.

Participants will also be taught the value of the most informative radiographic views for the veterinarian-farrier team and the reason for always being alert to the ever-changing soft tissue parameters and how these are a reflection of the mechanical forces. These lessons are the basis for veterinarians and farriers to build their mechanical thought process that allows them to think through any and all foot issues step-by-step.

## **R.F. “Ric” Redden, DVM**

Ric Redden, DVM, is known throughout the horse world as a veterinarian, farrier and educator. He owns and manages the International Equine Podiatry Center in Versailles, KY, the first exclusive podiatry practice in the horse world. Dr. Redden is one of the world’s foremost experts on laminitis and other hoof problems and travels internationally, teaching others his ground-breaking techniques and concepts.
